## INVEST

As a brick and mortar business, your parking lot is an important opportunity to

create a permanent positive impression. A newly sealcoated and striped parking lot is visually striking and reflects the care you put into your business, brand, and services.

We are CasTech-- Pensacola's premier provider of parking lot services. Our brand complements your brand and our services and products will exceed your expectations.

The life expectancy of a well-built, well-maintained parking lot can be 25+ years. We do great work to ensure we will remain your service provider for the duration.

## IMPRESS

All parking lots develop cracks which over time wear into potholes

and traffic markings eventually fade. Proper and regular maintenance of a parking lot creates significant monetary savings over the life of a paved asphalt surface.

Sealcoating is a maintenance technique designed to maximize the life of your lot. We use Black Diamond, a high-performance environmentally-friendlier alternative to refined tar sealers. It is durable, stable, stain-resistant, and tougher than other products.

**LOCAL**

Crew supervisors on site  
throughout the project

**RELIABLE**  
Available for immediate assistance  
and future maintenance needs

## DIRECT

Striping a parking lot indicates to drivers how to navigate the lot safely and accurately. When designing a parking lot, the creation of a layout that properly communicates traffic-flow is essential.

While adhering to federal regulations we reconcile the unique geographical attributes with the highest/best use of the parking lot. Utilizing symbols, lines, and arrows we ensure your traffic is conducted safely and efficiently through your parking lot.

## PROTECT

Wheel stops, also called parking blocks or bumper blocks, are concrete castings placed at the front of the parking stall to prevent vehicles from moving beyond the forward boundary of a parking space. Installing wheel stops helps protect your hardscaping and landscaping investments.

We consider parking blocks to be protective barriers and build them to endure. Our heavy-duty 200-pound wheel stops are cast with high-quality aggregate concrete, reinforced with two pieces of rebar.

With an unmatched production capacity of over 2500 per month, we can meet your quantity needs.

We ship to select counties in Florida, Alabama, Georgia and Mississippi.
